POINT OF CONTACT

HOW TO READ THIS

Three divisions, one contract

Each division has its own section: what it is licensed to do, how the work is run, and what you are handed at the end. Where a commitment depends on a third party, the section says so rather than promising around it.

The Company

One commercial registration, three licensed divisions, run from Doha.

System Trading Contracting and Services is a Qatari limited liability company licensed to trade communications equipment, to build, and to carry out government and business services. The three sit under one commercial registration, so a client who needs network hardware supplied, a structure built and the paperwork cleared deals with one company and one contract.

The company is deliberately scoped. We take work we are licensed and equipped to finish, we quote against the specification in writing, and we hand over documentation with every job. Where a package needs a trade we do not hold in-house, we say so at quotation stage and bring in a named subcontractor under our own supervision.

At a Glance

Doha, State of Qatar

Head office and operating base

C.R. 253420

Ministry of Commerce and Industry

Three licensed divisions

ICT trading, contracting, business services

Two managers

Both registered with full signing authority

10-50 personnel

Mobilised per project, supervised by engineers

Qatar Chamber member

Commerce and Industry

One contract, three capabilities

Supply, build and clear the paperwork without appointing three vendors and reconciling three programmes.

Scope you can verify

Every division in this book maps to an activity on C.R. 253420. Nothing is offered that the registration does not cover.

Written before it is started

A priced scope, an exclusions list and a programme go out before mobilisation. Variations are priced in writing too.

PLAINLY

A new company, run by people who are not

The registration is recent and we do not dress that up with a founding date or a project count. What we put behind a quotation is the licence, the crew we can field, the engineers who supervise it and a written scope you can hold us to.

Capability and Capacity

What we put on site, who supervises it, and how it scales.

We mobilise between ten and fifty personnel for a single project, sized to the programme rather than to a standing payroll. A fit-out or a cabling package runs at the low end; a structure with concrete and blockwork fronts runs at the high end. The number is written into the quotation and into the programme, so you can hold the crew to it.

10–50

PERSONNEL PER PROJECT

Trades We Field

 Site supervisors	 Masons and block layers	 Steel fixers
 Shuttering carpenters	 Concrete crew and finishers	 Welders and fabricators
 Electricians	 ICT supervisors and coordinators	 Plant operators and drivers

Supervision and Engineering

-  **Civil engineering supervision**
Setting out, formwork and reinforcement checks, concrete placement and curing, and sign-off of each structural stage before the next starts.
-  **Electrical and ICT engineering supervision**
Containment routes, cable schedules, termination and labelling standards, and witnessing the certification test that closes each link – on the installation contractor's crew as much as on our own construction and manpower crews.
-  **One supervisor per crew**
No crew works unsupervised. The supervisor on your job is named in the quotation and does not change without telling you.

10–50	9	2	1
PERSONNEL PER PROJECT	TRADES ON CALL	ENGINEERING DISCIPLINES	SUPERVISOR PER CREW

THE LIMIT, STATED
We size the crew to the job

Above fifty personnel on one site we would be sub-letting rather than supervising, so we decline or we bid it as part of a joint package and say who the other party is. Transport, accommodation and site welfare for our own crew are ours to arrange and are priced in, not added later.

How We Work

Five steps, the same on a cable run and on a concrete frame.

01

Enquiry and scope

You send a drawing, a bill of quantities or a description. We come back within two working days with what we read the scope to be, and with the questions that change the price.

02

Site survey and specification

We measure on site rather than off the drawing: routes, levels, access, power, working hours and anything already built that we have to join. The specification is written from that visit.

03

Written quotation

A priced scope, a stated exclusions list, lead times for anything imported, and a programme with dates. Nothing starts on a verbal.

04

Execution under supervision

Crew mobilised to the agreed number, a named supervisor on site, engineering sign-off at each stage, and a short written progress note at the interval you choose.

05

Documented handover

Snagging closed in front of you, then the handover pack: as-built marked drawings, test results, warranty papers and the delivery notes for every item supplied.

What happens when the scope changes mid-job?

It is priced and signed before it is built. An instruction given on site and never written down is the single most common way a job ends in a dispute, so we do not work that way.

Who do we deal with day to day?

The supervisor named in your quotation, and either of the two registered managers. There is no account-management layer between you and the site.

What if something is defective after handover?

Supplied goods carry the manufacturer's warranty, valid in Qatar because the goods are bought through authorised distribution. Workmanship is covered for the period stated in the contract, counted from handover.

DIVISION I

ICT and Communications Trading

Retail sale of information and communications equipment in specialised stores. We supply wired and wireless communication equipment, networking devices, routers, switches and wireless access equipment. We do not carry out the installation ourselves — our licence does not permit it. It is carried out by a contractor licensed for that work, appointed with your approval and named in the quotation, and it runs under our supervisor, to the specification we wrote.

STRUCTURED CABLING

FIBRE

SWITCHING AND ROUTING

WIRELESS ACCESS

RACKS AND CONTAINMENT

SUPERVISED INSTALLATION

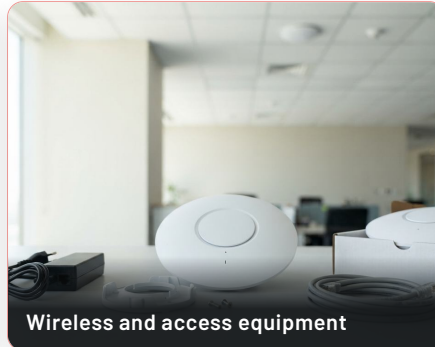

What We Supply

The licensed range, and the commercial terms it comes on.

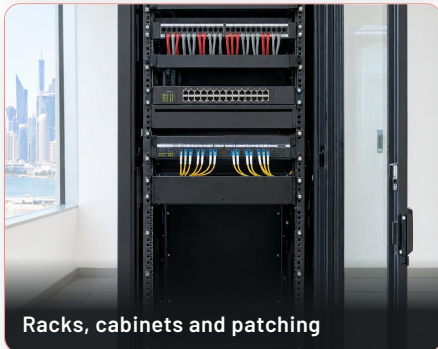

Wired communication equipment

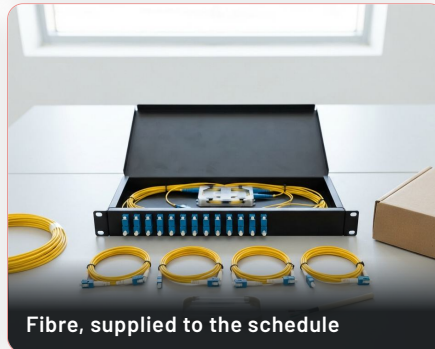

Wireless and access equipment

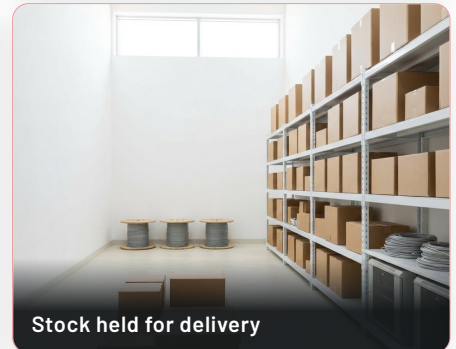

Networking devices, routers and switches

Racks, cabinets and patching

Fibre, supplied to the schedule

Stock held for delivery

The Range in Plain Terms

Wired communication equipment

Copper and fibre cable, patch panels, patch leads, faceplates, modules, containment, trunking and cabinet accessories — by the drum or cut to a cable schedule.

Wireless communication equipment and access points

Indoor and outdoor access points, point-to-point links, antennas, mounting kits and the injectors or PoE switching they run on.

Networking devices, routers and switches

Managed and unmanaged switching, routing, firewalls, media converters, transceivers and rack-mount power — specified to the port count, throughput and warranty term you give us, not to whatever is in stock.

Racks, cabinets and the parts nobody lists

Floor and wall cabinets, shelves, blanking, cable management, labels and earthing. These are the items that hold a cabling handover up, so we quote them with the main order.

HOW WE BUY

Authorised channels only

Goods are bought through authorised distribution so the manufacturer's warranty is valid in Qatar and can actually be claimed here. We are not tied to one manufacturer: tell us the standard you need and we quote against it, with the make and model written on the quotation before you sign, never substituted afterwards without your approval in writing.

Installation, **Supervised**

Installed by a licensed contractor. Specified, coordinated and checked by us.

01

Specification and appointment

We write the installation specification from the drawing and the survey, then put it to contractors licensed for the work. You approve the appointment before anyone mobilises.

02

Containment and routing, witnessed

The contractor sets out tray, trunking and conduit; our supervisor checks the routes, the segregation from power and the bend radii before a cable is pulled.

03

Cable pulling and dressing, checked

Drum numbers recorded against our delivery notes, nothing installed outside its bend radius, cabinets dressed and combed – checked as the work proceeds, not at the end.

04

Termination, labelling and testing

Terminated and labelled to one written scheme. The contractor's certified technician runs the link testing and issues the results; our supervisor witnesses it and checks every link. A link that fails is re-terminated and re-tested, not averaged away.

05

Commissioning and documented handover

Active equipment racked, powered and addressed by the contractor. We collect the as-builts, the test file, the delivery notes and the warranty papers, and hand them over as one pack.

What You Are Handed

Per-link test results

Issued by the contractor, witnessed by us

As-built drawings

Marked up against the issued drawing

Labelling schedule

The naming scheme, written out

Delivery notes

Make, model and serial of everything we supplied

Warranty documents

Manufacturer warranty, claimable in Qatar

Snagging sign-off

Walked with you and closed before handover

THE LIMIT, STATED
We do not install —
our licence does not
permit it

System TCS holds no licence for installation work and does not carry it out; our registration covers the supply. The installation is executed by a contractor who holds that licence, appointed with your approval and named in the quotation. We are accountable for the specification, coordination, inspection, witnessed testing and the handover pack; the test certificates are signed by that contractor, not by us.

DIVISION II

Building Contracting

Industrial and workshop buildings: new structures from foundation to roof, plus the foundation, structural, blockwork, concrete and roofing packages taken on their own. We build to the issued drawing and the issued specification, and we say at quotation stage what we have assumed where the drawing is silent.

INDUSTRIAL BUILDINGS

WORKSHOP BUILDINGS

FOUNDATIONS

STRUCTURAL WORKS

BLOCKWORK AND MASONRY

CONCRETE

ROOFING

Scope of Works

Eight packages. Take them together, or take one.

01

Industrial buildings

New industrial premises built to the issued structural and architectural drawings, from setting out through to a weathertight and handed-over shell.

02

Workshop buildings

Workshop and light-industrial units, including the floor slab, the frame, the envelope and the openings sized for the plant and the vehicle access the use actually needs.

03

New industrial and workshop structures

The complete structure as one package where the client prefers a single contract over separate foundation, frame and envelope appointments.

04

Foundation and structural construction

Excavation, blinding, reinforcement, formwork and placement for pads, strips, rafts and ground beams, set out and checked before any pour.

05

Main structure of industrial and workshop premises

Columns, beams, slabs and the primary frame, erected in the sequence the design requires and signed off stage by stage.

06

Blockwork, brickwork and masonry

Internal and external walls, piers and infill to the drawing, with openings, lintels and ties set as specified rather than cut in afterwards.

07

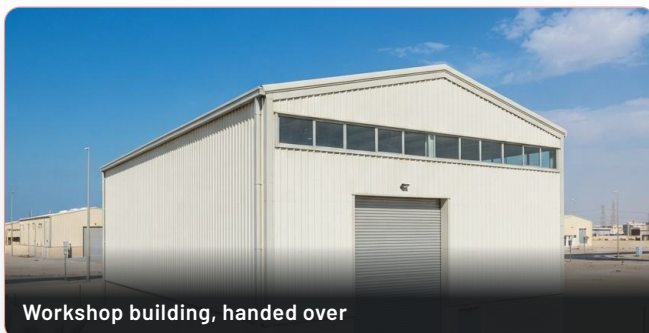

Concrete works

Mix to the specified grade from a batched supply, slump checked on delivery, placed, vibrated, finished and cured – with cube results handed over.

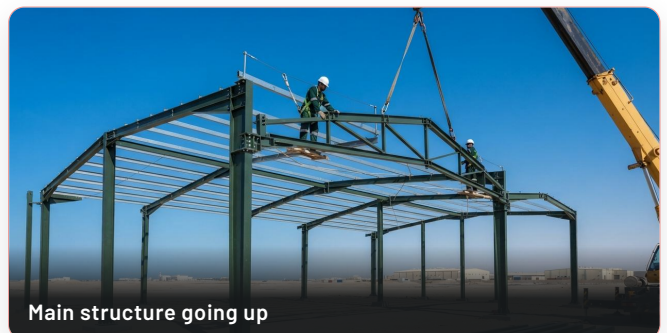

08

Roofing and related building construction

Roof structure, decking, insulation, sheeting and flashings, laid to falls and water-tested before the scaffold comes down.

Workshop building, handed over

Main structure going up

HOW WE PRICE IT

Against the drawing, with the gaps named

Where the drawing or the bill is silent – ground conditions, an existing structure we have to tie into, a service we are told is diverted – the assumption we have priced on is written on the quotation as an assumption. If it turns out otherwise, the variation is priced from that line rather than argued from memory.

Site, **Safety** and Handover

How the crew runs once the contract is signed.

Mobilisation

Crew sized to the programme and on site at the agreed number, with transport, accommodation and welfare arranged by us and priced into the quotation, not invoiced later as a preliminary.

Daily supervision

A named site supervisor every working day, reporting to the engineering discipline the stage belongs to. Setting out, reinforcement and pre-pour checks are signed before work proceeds.

Safety on site

Toolbox talk before each new activity, PPE issued and enforced, exclusion zones around lifting and placement, and any incident recorded and reported to you the same day.

Programme and progress

A dated programme at award and a short written progress note at the interval you choose – weekly by default, with photographs.

Quality control

Concrete cubes to the specified frequency, levels and verticality checked before the next stage, and nothing closed up until it has been seen.

Snagging and handover

We walk the works with you, list the snags on paper, close them, and hand over the pack: as-built marked drawings, cube and test results, material delivery notes and warranty papers.

Daily	Weekly	Stage	Same day
SUPERVISION ON SITE	WRITTEN PROGRESS NOTE	ENGINEERING SIGN-OFF	INCIDENT REPORTING

THE LIMIT, STATED

A programme is a plan, not a guarantee

Dates in our programme assume continuous access, a free working front, and approvals and client decisions inside the periods written on the quotation. Where a delay is ours we carry it. Where it is not, we say so in writing on the day it happens rather than at the end of the job.

DIVISION III

Government and Business Services

Transaction follow-up and business support. We assemble the file, submit it, chase it and tell you where it is. The decision belongs to the authority; what we commit to is the quality of the submission and the frequency of the follow-up.

TRANSACTION FOLLOW-UP

DOCUMENTATION

RENEWALS

AUTHORITY LIAISON

SUBMISSIONS

VENDOR COORDINATION

What We Handle

Four service lines, all of them paperwork that stalls a business.

01

Transaction follow-up and processing

An application already lodged, or one we lodge for you, tracked through its stages with a named person chasing it and a written status you can forward to your own management.

02

Documentation and renewals

Commercial registration, trade licence, chamber membership, establishment cards and the attestations that hang off them – assembled, checked against the current checklist and filed before the expiry date, not after it.

03

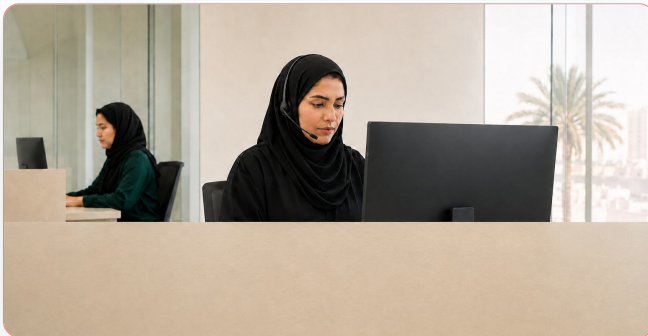

Authority liaison and submissions

Counter work and portal submissions with the relevant ministry or authority, including the resubmission when a file comes back with a correction.

04

Supplier and vendor coordination

Collecting quotations, comparing them on like terms, placing and tracking orders, and chasing delivery and documentation so the paperwork matches what actually arrived.

WHY IT IS IN THIS BOOK

The same job, on the other side of the counter

A supply order and a building contract both die in documentation – a missing attestation, an expired card, a submission nobody chased. Running that desk ourselves is why our own deliveries clear and our own crews are on site on the day we said.

What You **Receive**

The deliverables, the rhythm, and the thing we will not promise.

A checked file, not a bundle

Every document checked against the authority's current checklist before submission, with the gaps listed back to you in one message rather than one at a time.

A submission date in writing

You are told the date the file went in and the reference it went in under, the same day it happens.

A follow-up interval you choose

Weekly by default. You get the status even when the status has not changed, because silence is what makes a client phone.

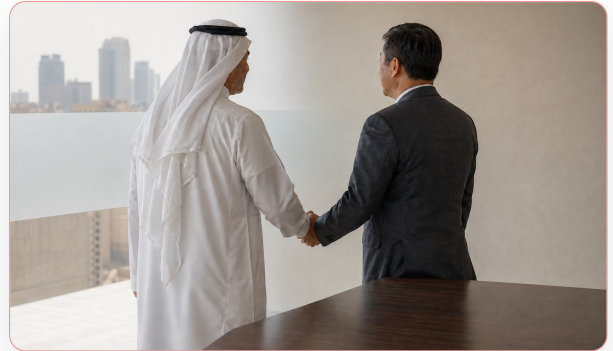

A renewals calendar

Every document we handle for you carries an expiry date, and we hold the calendar and raise it in advance of the deadline.

A closure pack

On approval you receive the issued document, the receipts and the correspondence, as one file.

Can you guarantee the approval?

No, and nobody honestly can. The decision belongs to the authority. What we control is that the file is complete, correct and lodged on time, and that a rejection is corrected and resubmitted without you having to notice it first.

Can you guarantee how long it takes?

We give the authority's own published or customary timeline and then report against it. We do not quote a turnaround we cannot enforce.

Who holds our documents?

Originals stay with you unless the submission requires them, in which case they are receipted out and receipted back. We keep scanned copies only for as long as the matter is open.

THE LIMIT, STATED

We promise our own acts, not the outcome

Assembly, accuracy, the submission date, the follow-up interval and the closure pack are ours and we are accountable for them. Approval, fees set by the authority and the authority's own timeline are not, and we will not take money against them.

Registration and Compliance

The record behind every page of this book.

Company Record

Licensed Activities

DIVISION	ACTIVITY AS REGISTERED
I	Retail sale of information and communications equipment in specialised stores
II	Building construction
III	Transaction follow-up and business support services

How We Contract

-  **Written scope and exclusions**
Priced against the drawing or the specification, with every assumption named.
-  **Variations priced before built**
No instruction is acted on until it is written and signed.
-  **Documented handover**
Test results, as-builts, delivery notes and warranties, as one pack.
-  **Authorised supply only**
Goods bought through authorised distribution so the warranty is claimable in Qatar.

Three Divisions, One Registration

SCOPE DISCIPLINE

Everything here maps to the registration

Each division in this profile corresponds to an activity on C.R. 253420. We do not quote work outside it, and where a package needs a trade or a licence we do not hold, we name the subcontractor at quotation stage and supervise them ourselves.
